

## Product Data Sheet

# König One Glue

### Description:

**König One Glue** is a ready-mixed, multi-purpose, versatile adhesive that is completely waterproof. It has superior bond strength and low odor. It does not lose adhesion even when exposed to outdoor elements so it is great for decks and sidings. It is unaffected by heat or cold and it is stainable, sandable, paintable and it seals gap. It expands four times its original size.

### Surface preparation:

All previous coatings must be removed. The surface should be clean, dry and free from dirt and all loose particles. For smooth or non-porous surfaces, sand lightly to roughen the surface. Dampen one surface using a damp cloth or sponge. Do not flood the surface. For dense woods, dampen both surfaces to be glued together.

### Application:

Apply **König One Glue** using a brush or spatula. Spread the glue evenly on the surface to be bonded. Clamp the substrate together using a clamp or any heavy object that would apply pressure on the substrates. Leave it clamped for 1-2 hours. For best results, leave to dry overnight. Uncured glue can be removed with mineral spirit or paint thinner. Cured glue is totally resistant to solvents and can only be removed by sanding, chiseling, or scraping.

### Availability:

**König One Glue** comes in four sizes: ¼ pint (75mL), ½ pint (250mL), 1 quart (950mL), 1 gallon (3,850mL). It can be purchased in New Manila Hardware, DIY stores, and home centers.

### Coverage:

Depending upon the thickness of application, one gallon of König One Glue will cover approximately 25-30 square meters.

**Storage:**

Close container after each use. Make sure the can is tightly closed. Keep away from heat as this shortens the storage life. Keep out of children's reach.

**Clean up:**

To remove glue from hands, use an old rag. Soap and water will do the job as well.
